LIFT-

n-LOK

Intelligent tool and equipment storage for Technicians, Tradesmen, Home and Hobbies

LIFT-n-LOK's unique features will provide reliable, quick and easy access to all essential tools, equipment and parts, enabling even the smallest of components to be located almost instantly.

Until now the useful combination of a tool box with drawers has meant you had to settle for a storage unit with a time consuming, fiddly opening and closing mechanism. These units could also be picked up without being fully secured, resulting in frustration as the contents spilled evrywhere - sound familiar?

Well not any longer - LIFT-n-LOK is here and is the only toolbox on the market to deliver all of these intelligent features:

- > Our patented system has the quickest fastening system on the market for a storage system with both a storage bin and drawers and is the only truly fail safe system on the market.
- > AUTOMATIC gap closing system prevents mixture between drawer compartments.
- > NO fragile catches or doors needed, drawers and lid are fastened AUTOMATICALLY.
- > Drawers can easily be removed for cleaning.
- > Drawer dividers are removable to customize the storage configuration.
- > Supreme ease of use even when wearing gloves or with cold fingers.

How it works

The cam attached to the ends of the handle lifts the drawers as the handle is raised - this secures the lid, closes the clearance gap between the drawers and interlocks them with the carcass. The system ensures that no extra effort is required above that needed to lift the unit. The handle can then be moved to the forward position for storage.

Drawers and lid can be locked with a single 1.5" (40mm) padlock (Padlock not included)
